Challenge: Unlock Me!

Narrative:

`An encrypted archive has been recovered from a decommissioned deep space relay station. Nobody knows what is in it. It is probably not important. You should try to open it anyway.`

Objective:

You have been provided with the files necessary to begin. One of them allegedly contains information that will help you access the archive. Unfortunately it seems to be withholding that information until it is ready to share it. You may need to convince it otherwise.

What you do with the information it eventually provides is your problem. There will be several steps between here and the archive, and some of them will require tools and techniques from earlier challenges. Others will not. If you get seriously stuck, ping your instructor, who will reluctantly provide a hint.

As a challenge deliverable, upload a ZIP file containing the following items to Canvas:

(1) A `pdf` document that provides a thorough summary of your team's completion of the challenge. The document must include:
- the steps you took to solve the challenge and all information obtained during that process;
- the time at which you were able to unlock the provided pdf;
- a description of **each** team member's contributions. Please note that each team member should contribute their own paragraph to this section.

(2) copies of any patched executables you created in the process;
(3) copies of any java reflection code you might have used in the process;
(4) copies of any scripts or programs that you wrote to help in the process;
(5) a `readme` file showing how to run your executables and/or scripts particularly if they have a non-conventional way of being run. This can be embedded in the script using comments at the top of the file, or placed in a separate `readme` file if the executable cannot be opened.

You will be graded on how well you:

(1) documented your process (35%);
(2) patched the executable(s) (40%);
(3) wrote the password search script (20%); and
(4) submitted the required ZIP file (5%).

Good luck. The stars are not going to help you.
